

Square active-partition witness: N=50, perturbation magnitude 0.2, case 3

Before: stale retained-parent accounting
32 retained entries, 30 active pairs, 30 facets

After: active-partition accounting
30 active polygons, 30 facets

Method	Retained / active -> polygon / facet	LVIRA cells	Pre/post facet JSON	Hausdorff	Facet gap	Area error
linear	32 / 30 -> 30 / 30	2	exact	4.942e-01	1.284e-01	4.515e-12
linear+corner	32 / 30 -> 30 / 30	2	exact	3.079e-01	1.926e-11	1.100e-11
circular	32 / 30 -> 30 / 30	2	exact	5.120e-01	9.200e-02	1.010e-10

Red hatching marks duplicate bookkeeping entries on the same blue active cells, not extra geometry. The pre/post facet JSON and VTP hashes are byte-identical; corrected metrics are shown above.
